

FinAl: Intelligent Financial Personalization

Team: Persona Genie

Pradeep Rampelli, Arun Kapuganty, Haque Mahufujul, Praveen Behara & Sobha Warrier

Problem Statement

- Modern customers expect experiences tailored to their preference.
- Business struggle to optimize engagement without deep insights

Solution Overview

AI-DRIVEN PERSONALIZATION

- Our approach leverages AI to offer hyper-personalized recommendations, integrating diverse data inputs including behavior, preferences, and financial history to enhance engagement.
- Delivers actionable insights to business for enhancing customer engagement.

Features

- Chatbot with Voice Interaction: Enables users to interact using voice commands, making recommendations more accessible and intuitive.
- **AI-Driven Predictions:** AI-Driven Predictions: Provides personalized suggestions for credit card plans and investment opportunities based on transaction history and risk assessment. For new users, recommendations are tailored based on preferences such as travel, shopping, and lifestyle choices

ENHANCING CUSTOMER EXPERIENCE

Personalized financial insights lead to improved client satisfaction, fostering long-term loyalty and engagement.

FINANCIAL GROWTH POTENTIAL

Institutions can expect revenue growth through enhanced services that adapt to customer needs, establishing a competitive edge.

Investment & Card Recommendations

Smart Credit Card Recommendations:

Al analyzes vast data to tailor investment suggestions based on individual risk tolerance and goals.

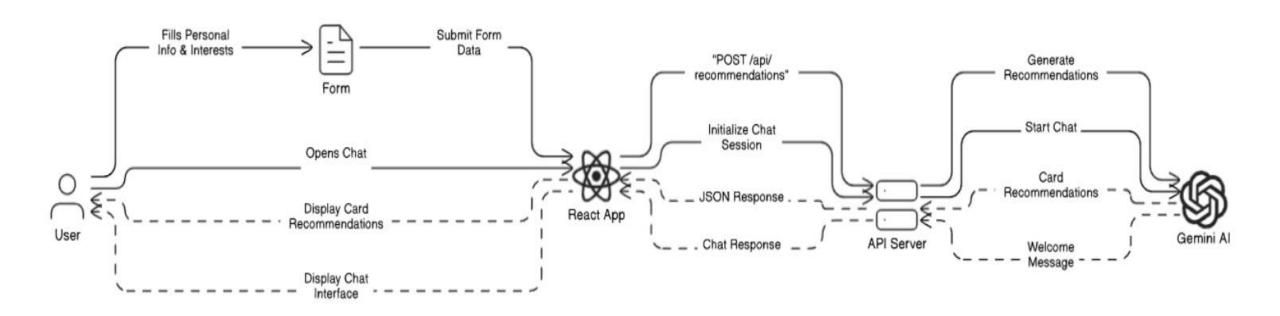

- New Users: All suggests the best credit card options based on user preferences, spending habits, and financial background.
- Existing Users: All evaluates past transaction history and spending patterns to recommend suitable upgrades or new cards that align with evolving needs.

DATA SOURCES FOR PLANS

Investments rely on various data sources including market trends, customer portfolios, and economic reports. This broad data pool enriches the recommendations made.

System Architecture

The system architecture combines various components such as React, Flask server, and Gemini AI, facilitating data processing and user interactions seamlessly. We utilize the Gemini AI model for intelligent recommendations, integrated with a React-based UI and a Flask backend. The system includes a chatbot for user queries and personalized credit card recommendations based on transaction history and preferences.

Technology Stack

- React Interactive and responsive user interface for seamless customer experience.
- Flask Lightweight Python framework for API development and integration.

Data Management:

- JSON Files Storing structured data for quick access.
- Excel Documents Managing and processing data inputs for recommendations.

Incorporates Gemini AI and RAG, optimizing the personalization process while maintaining high efficiency.

INFLUENCES ON RECOMMENDATIONS

Customer sentiment analysis impacts recommendation algorithms significantly. Understanding emotional tone helps tailor suggestions for better user satisfaction.

EXAMPLE AI SUGGESTIONS

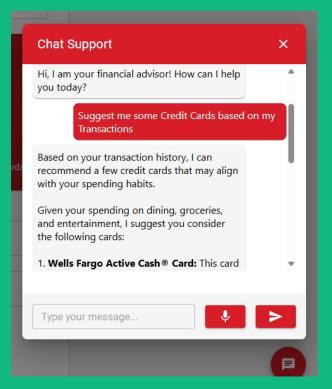

For instance, frequent travel bookings may prompt suggestions for travel reward cards, while high online spending could lead to cashback card recommendations

Card Recommendation Flow

Receive tailored credit card suggestions based on User preferences, transaction history and spending patterns

Future Enhancements

MULTI-LINGUAL SUPPORT

Expanding language options will enable diverse user engagement, enhancing accessibility for non-English speaking customers.

Multi-Modal Content Recommendations

Combine images, audio and text to generate personalized videos and links based on the user's mood.

LOANS & INSURANCE EXPANSION

Future plans include extending Al recommendations to loans and insurance, broadening the range of financial products offered.

Conclusion & Next Steps

KEY TAKEAWAYS AND ACTION

In summary, Al-powered insights transform finance through enhanced customer engagement, personalized solutions, and future-oriented tools.

Next Steps:

- Consider collaborating on innovative applications of this technology.
- Improve recommendation accuracy by integrating additional data.
- Dynamic refining of product suggestions by introducing real time analysis.
- Optimize UI to ensure seamless interactions with chatbot.
- Conduct Testing with various user groups to validate effectiveness of Aldriven recommendations.
